DDWIN Ver 3.00.039

tlib-revision-history

Revision 20 on Thu Mar 27 12:26:26 1997 by STIJN DDWIN Ver 3.00.042

maxNumHypos is set to 40 for Italian and 10 for Spanish

Revision 19 on Wed Mar 26 16:47:51 1997 by STIJN

DDWIN Ver 3.00.039

findSoundAlike had bug when when there was only one item in database that was a close match, and we landed just after it so that we never found a sound alike. Also put in a back-off so that now we should always get an assignment.

Revision 18 on Tue Mar 25 15:11:16 1997 by STLJN DDWIN Ver 3.00.036

Revision 17 on Tue Mar 25 10:32:44 1997 by STLJN DDWIN Ver 3.00.035

Added some checks in AssignOnePron()

Revision 15 on Mon Mar 24 12:49:10 1997 by STIJN

DDWIN Ver 3.00.031.002 FR

Added robustness against long and bizarre spelling strings i.e "aslkdj ask as xxy as asddcds 8"

Revision 14 on Fri Mar 21 10:52:52 1997 by STLJN

DDWIN Ver 3.00.029.001 FR

maxNumHypos is set to one when we hypothesize an acronym.

Revision 13 on Thu Mar 20 19:30:02 1997 by STIJN

DDWIN Ver 3.00.029

are added up to 3 prons. After that the 3rd pron is being replaced each time (3) an existing word with a pron that was misrecognized. Additional prons We now create a new pron for (1) a new word; (2) an existing word with a zero based model and delete that model when the guesser is successful; Added more pron-helper support. It is now applied in the server. a correction is done on that word.

We now create one pronunciation even when there is no utt. We take the top hypothesis and assign it to the word. If it is a bad pron, the error correction will recover it with a better one.

Revision 12 on Wed Mar 19 19:16:35 1997 by STIJN DDWIN Ver 3.00.027.005 FR

Revision 11 on Wed Mar 19 17:50:33 1997 by STIJN DDWIN Ver 3.00.027.004 FR

Revision 10 on Tue Mar 18 17:48:46 1997 by STLJN

DDWIN Ver 3.00.024

Changed char * into char far * for the file name arrays. Added more support to add pronunciation helper models.

Revision 9 on Tue Mar 18 10:11:36 1997 by STIJN DDWIN Ver 3.00.021

Array of prefilter names did not seperate new language names with commas.

Revision 8 on Mon Mar 17 19:08:19 1997 by ADAM DDWIN Ver 3.00.019

Pixed bug where word with sound-alike pron wasn't getting created

Revision 7 on Mon Mar 17 15:19:50 1997 by STLJN

DDWIN Ver 3.00.014

Removed some memory leaks due to "new" allocations in initialize() Now that initialize can be called several times, this was a bug.

Revision 6 on Thu Mar 13 19:27:31 1997 by STIJN DDWIN Ver 3.00.010

We now always hypothezise an initials pron for each word.

The module now checks whether the pron guessing data files exist, before trying to load them. If they do not exist, then we do not initialize the guesser.

Revision 5 on Thu Mar 13 15:17:31 1997 by STIJN DDWIN Ver 3.00.004

We now delete words from hSymphonVoc. Before, we only deleted from the temp state, which caused an sdapi WORD ALREADY EXISTS error if the same word was pron guessed again. Added support to add additional prons for an existing word.

Currently not The define EXISTFILE is not defined. It will be removed once I have done by the caller, due to a driver bug that can not handle adding additional prons to an ALPHA_ORDERED state

made sure that checking the existence of the pron files works correctly.

Revision 4 on Mon Mar 10 13:42:39 1997 by STLJN DDWIN Ver 2.52.084

,

```
// new IDS in temp.voc so that a decision
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       // to close and reopen voc can be made
